

SUSTAINAVILLE

Two friends, Ava and Lila, were sick and tired of the city they lived in. Their city was called Terrible, because all the people were littering. The rubbish was travelling into rivers, streams and creeks, and it was all flowing into the ocean. The rubbish would end up with its family, the Great Pacific Garbage Patch.

The girls had to come up with a plan to stop this, otherwise the Great Pacific Garbage Patch would become bigger and bigger, and the sea animals would die.

Also, all this rubbish made Terrible City very dirty and polluted.

"What do we do?" said Lila, with a sad face.

"I don't know, but we need to do something," said Ava.

The girls thought and thought for ages. Then, Ava had an idea.

"Why don't we build a huge, giant, big robot to collect all the rubbish from all over the city and the Great Pacific Garbage Patch. Then we could recycle and make new things out of the garbage."

"But how?" Lila was confused.

"Don't worry, I've got this covered." said Ava.

Ava and Lila talked to the people in the factories in the city, and told them to get out of the factories.

Then they talked to their parents, and asked them if they could call someone that has a crane with a wrecking ball.

Their parents were a bit confused, but they did.

Soon, everyone was outside of the factories.

The wrecking ball and crane drove to the factories too, and when Ava and Lila shout "3...2...1...GO!" it knocked down factory 1. Then it goes over to the second factory and knocks that down too. Finally, it goes over to the last factory. "3...2...1...GO!!" shouts Lila and Ava at the same.

Then they bring all the parts of the factory over where they are going to build the robot, and they start building. There are lots of big chunks of metal that have dents in them, but that's fine to build a robot with.

Finally, they have finished the robot, and it took them 4 hours to build!!!

"Let's go." said Lila.

"Yeah!" yelled Ava.

They hop in the robot's brain, and Ava starts moving the robot, with the controls.

After they pick up all the rubbish in the city, they head to the Great Pacific Garbage Patch.

When Ava presses the big golden button, the robot starts to walk on the water towards the Great Pacific Garbage Patch.

Then, when they get there, Ava drives the robot over to the rubbish. The robot starts to pick up all the garbage.

Once it's all gone, they go home. They dump all the rubbish in a big pile. "What should we do with all this rubbish?" said Lila.

"Let's make this city a better place." said Ava.

After a few weeks, the city is nice and clean, with Ava and Lila recycled things everywhere, like new roads, sustainable houses and buildings that use good energy and help the people live in the city.

Then, they make a sign, saying 'Sustainville' instead of Terrible City. Ava and Lila now have a beautiful world that is not dirty or polluted.

Help look after our world by picking up your rubbish!
Be part of the solution, not the pollution.

THE END
